

Radcliffe Engineering provides professional services covering a wide range of civil engineering needs; including subdivisions, roads, drainage, water, sewer, site planning and development, water & wastewater treatment facilities and FEMA flood certifications. Our staff has the proper blend of expertise and experience required to successfully complete a variety of civil design projects.

We have been a consulting firm in Ocala, Florida since 1991 and have completed hundreds of civil engineering design projects. Our relationships with local and state regulatory agencies have been essential for permitting and design of many Public and Private sector projects.

Civil Engineering Design

Site

Site development experience includes: Restaurants, Medical, Banks, Churches, Convenience Stores, Truck Terminals, Gas Stations, Office Parks, Shopping Centers, Industrial, Warehouses, Water and Sewer Systems.

Roadway

We have successfully completed many road projects for both public and private sector clients. Throughout our many years in business, we have designed over 150 miles of roadway.

Subdivision

Our design team's experience enables us to design efficiently, while anticipating future issues, thus expediting development of your project. Relationships with local and state regulatory agencies have allowed us to minimize permitting time.
